# Business Problem Statement

CaixaBank invest significant resources in telemarketing campaigns to promote term deposit products, yet a large proportion of contacted customers do not subscribe. This results in low subscription rates, inefficient use of marketing budgets, and wasted sales efforts.

The management team is particularly interested in identifying customer characteristics, financial profiles, and campaign strategies that drive successful conversions, enabling the bank to target the right customers, optimize outreach efforts, and improve overall campaign performance.

You are tasked with analyzing the company's previous and current campaign data to answer the following question:

**How likely a customer is to subscribe to a term deposit in a campaign?**

# Deliverables

**1. Data Preparation & Modeling (Python):** Clean and transform the raw dataset for analysis.

**2. Data Analysis (SQL):** Organize the data into a structured format, and run queries to extract insights on customer segments, most effective campaign conditions and factors influencing customer's decision to subscribe to a term deposit.

**3. Visualization & Insights (Power BI):** Build an interactive dashboard that highlights key patterns and trends, enabling stakeholders to make data-driven decisions.

**4. Report and Presentation**: Write a clear project report summarizing key findings and business recommendations. Prepare a presentation that visually communicates insights and actionable recommendations to stakeholders.

**5. GitHub Repository:** Include all Python scripts, SQL queries, and dashboard files in a well-structured repository.
